

●2.7色标检测传感器Color scale sensor

色标检测传感器采用光发射接受原理，发出调制光，接收被检测物体的反射光，并根据接收光信号的强弱来区分不同的颜色，或判别物体的存在与否。在包装机械，印刷机械，纺织及造纸机械的自控系统中作为传感器与其他仪表配套使用，对色标，或其它可作为标记的图案色块、线条，或物体的有无进行检测，可实现自动定位、定长、辨色、纠偏、对版、计数等功能。

本系列传感器采用光电技术，半导体电子技术，调制解调技术，具有灵敏度高，响应速度快，抗背景光干扰能力强，结构紧凑，使用方便等特点。

Color scale sensor applies the light emitting and receiving principle. It will send out modulating light, receive the reflecting lights from detected object, and distinguish the color or determine the existence of objects according to the intensity of the receiving signals. It can serve as a sensor used with other instruments in the automatic control systems for packing machinery, printing machinery, texture and paper making machinery, etc., to detect the existence of the object marked with color code, pattern code, line or others. It has the functions of self location, fixing length, distinguishing colors, correction, pattern check and counterling.

The sensor applies optoelectronic technology, semi-conductor electronic technique, and modulation demodulation technology, with highlights of high sensitivity, quick response speed, strong anti-backlight interference, compact structure and convenient operation, etc. 型号、技术参数： Model and technical parameters
